EDUCATION

Stony Brook University

Stony Brook, NY

B.S. in Computer Science, Minor in Digital Arts

May 2026

- Software Engineering + Development, Natural Language Processing, Machine Learning, 2D Game Programming, Scripting, Data Science, Data Structures + Algorithms, Networks, Systems Fundamentals, Object-Oriented Programming, Web Design

WORK EXPERIENCE

Global Tax Technology & Operations Intern

Jul. 2025 – May 2026

Assurant

Remote

- Designed a cloud-scheduled Excel autorefresh that runs queries and saves results to SharePoint, reducing wait time by 100%
- Automated missing-entry outreach with Power Automate, Excel Online, and SharePoint to respective accountants
- Learned Global Access/OIT data paths to design extracts into analytic workbooks for compliance/forecasting

Software Engineering Intern

Feb. 2025 – May 2025

Stony Brook University Human Resources Department

Stony Brook, NY

- Built PHP and Python scripts that auto-deploy site updates, harvest log metrics, and run accessibility checks
- Pushed updates to the Stony Brook Human Resources Website enhancing UI design with OmniCMS for 20,000+ users
- Conducted comprehensive UE/UX and accessibility testing and troubleshooting issues, enhancing Silktide score by 45%

Python Teaching Assistant

Jul. 2024 – Aug. 2024

Noble Desktop - NextGen Bootcamp LLC

New York, NY

- Assisted in teaching Python in an online and in-person setting to students from high school to university
- Facilitated multiple sessions of educating students on Data Science, Machine Learning, and Python Basics
- Received a rating of 4.6/5 stars while completing a personal goal of fostering the next generations of programmers

PROJECTS

P4SBU | React, Node.js, Express, PostgreSQL, Mapbox, Heroku

Apr. 2025

- Developed a full-stack university parking system featuring real-time lot availability, reservations, and secure transactions
- Built with Mapbox to integrate geospatial data and guide users to the nearest available parking spots via an interactive map
- Created administrative controls to make dynamic changes to the systems and view advanced analytics

Phreddit | MongoDB, Express, React, Node.js

Dec. 2024

- Engineered full-stack Reddit clone with functionalities like posting, commenting, and voting within communities
- Harnessed MERN stack to create a dynamic frontend and secure backend for RESTful APIs
- Implemented JWT authentication and cookies for account login and session management

LEADERSHIP & EXTRACURRICULARS

Software Engineering Fellow

Sep. 2025 - Dec. 2025

Google & BASTA

Remote

- Completed 10-week fellowship with pair programming, mentorship from a Google Senior Software Engineer

Diversity Professional Leadership Network Extern

Aug. 2024 – May 2025

Brookhaven National Laboratory

Long Island, NY

- Engaged with a mentor through job shadows and one-on-one coaching to enhance personal and professional growth
